

Adjustable Throw Quick Shift Kit

The BMP design adjustable quick shift kit is designed to reduce shift travel by up to 40%. Less on some vehicles due to space limitations. The flexibility of the adjustable shift lever pivot point gives you the option to adjust the shift reduction to your liking. Additional features are, a high quality adjustable silicone bronze pivot ball, and the anodized billet aluminum upper shift lever. Upper shift levers are machined to receive any factory push-on type shift knob, or any of our after market universal units. (available for most model BMW cars) The complete kit includes a custom lower shift lever with adjustable pivot point (for a adjusting shift throw), high quality silicone bronze shift bushing, for durability, and a high strength solid steel selector rod, to eliminate selector rod breakage. Some kits include a replacement upper aluminum shift lever.

Quick Shift Lever Only

If you have a newer vehicle, with the original lower linkage and bushing in good condition, we now offer a short shift lever only. This option will make installation much simpler, and offers additional savings. These levers are adjustable just like the adjustable throw kits. The only caution is that the heavy duty billet steel shift selector, and coupler are not included, and they are not sold separately.

ADJUSTABLE SHIFT KIT
Raising or lowering the adjustable pivot point reduces or increases the shift travel.
Adjustments can be made easily from inside your car.

Short Shift Kit

Racing Transmission Mount

During hard acceleration the stock transmission cross brace and rubber mounts are not rigid enough to keep the transmission in its proper location. The movement will pull the linkage at the transmission and in some situations damage transmission gears by partially disengaging the transmission. If this occurs during hard acceleration the internal gear damage can be extensive. Construction is of mild steel with 60 durometer urethane bushings.

B&M Sport Shifter

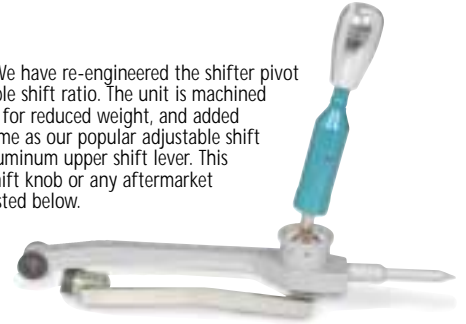

B&M Sport Shifters reduce shifter throw by as much as 20% to 25%. They are CAD-designed, then manufactured of the finest materials. Features include: two-piece, fully isolated stick assembly; integrated and dampened pivot cup with self lubricating pivot ball; and counter-balanced, polymer T-500 lower pivot bushings that are impervious to contamination. Consult your sales associate for specifics.

Pro-Shifter

This is our finest short shift kit. We have re-engineered the shifter pivot point to offer the quickest possible shift ratio. The unit is machined from high grade billet aluminum for reduced weight, and added strength. The shift lever is the same as our popular adjustable shift kit, including the light weight aluminum upper shift lever. This item will fit any original BMW shift knob or any aftermarket knob specified for the vehicles listed below.

Model	Body	Year	Item	Price

Differential Covers

The BMP design, high-efficiency differential cover will reduce differential oil temperature by as much as 20%. The custom aluminum cover with larger heat dissipating cooling fins, will reduce the risk of bearing failure due to lubricant break down. The cooling fins extend below the differential to take full advantage of the clear air passing under the vehicle. Limited slip units will have longer life expectancy due to the reduced oil temperature. The constructions is low pressure cast aluminum. The kit includes new rubber mounts, gasket, drain seal, and bolts, if required. The E36 cover increases differential oil capacity by 1.5 quarts.
